***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 3-7-05 has been entered.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kurth (6,180,686).

Kurth discloses isocyanate-reactive compositions comprising blown soy oil, crosslinking agent, blowing agent, and catalysts in amounts encompassing of appellant's claims (see the entire document).

Kurth differs from appellant's claims in that it is directed to the avoidance of environmentally questionable and relatively expensive petrochemical based polyols. However, its disclosure is replete with recognition of the well known nature of the polyols being avoided including specifics of molecular weight and functionality preferences for the various conventional polyols which they discuss to be well studied (see column 1 line 67 – column 2 line 29) which well encompass the molecular weight and functionality values claimed by appellant. Accordingly, it would have been obvious for one having ordinary skill in the art to have utilized petrochemical based polyether based polyols disclosed/avoided by Kurth in accompaniment with blown soy oil for the purpose of imparting relative non-degradability to the products being produced therefrom in order to arrive at the products of applicant's claims with the expectation of success in the absence of a showing of new or unexpected results. All disclosures of the prior art, including unpreferred or auxiliary embodiments, must be considered in determining obviousness. *In re Mills*, 176 USPQ; *In re Lambdi*, 192 USPQ 278', *In re Boe*, 148 USPQ 507.

On appeal examiner set forth the following arguments which were considered by the Board of Appeals in affirming examiner's rejection. They are maintained to be still applicable:

Appellant's arguments have been considered but rejection is maintained as the reference's disclosure taken in its completeness is seen to fairly suggest appellant's (applicant's) claimed invention as characterized by examiner. No additional reference is seen to be necessary to support examiner's position of obviousness because the reference is specific as to the materials being avoided. If one were not interested in obtaining the full ecological advantages associated with their preferred isocyanate

Art Unit: 1711

reactive component, then they would have been prima facie motivated to use the recited other well-known conventional petrochemical isocyanate-reactive materials identified by Kurth for their property engineering effects described.

Applicant's showing has been considered. However, showings of new or unexpected results which are commensurate in scope with the scope of the instant claims are not demonstrated in the affidavit evidence presented sufficient to overcome the instant rejection.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-7 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,649,667. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims disclose isocyanate reactive compositions which are

Art Unit: 1711

further employed in preparations of finished products, and the instant claims fully encompass the invention claimed in U.S. Patent No. 6,649,667 .
